

Public or Private Essential Services Allocation (Credit, Utilities, Benefits)

- *Industrial Parallel:* Utilizing tabular data and multi-class classification models to automate eligibility screening, asset access, or fraud detection.
- *The Labeling/Data Crisis:* Shifting policy baselines cause labeling inconsistency. Sparse datasets for lower-income brackets create a high false-negative profile, causing the model to shut out qualified individuals based on geographic proxy variables.
- *Regulatory Risk: **High Risk.*** Mandatory post-market monitoring, strict data-governance verification, clear human-readable explanations for negative evaluations, and mandatory inclusion in centralized public registers.
