

Automated AI Recruitment Screening Without Human Review

Annex III(4) — High-Risk: Employment & Workers Management

Description

A large employer deploys an AI system that autonomously shortlists, ranks, and rejects job applicants based on CV analysis, video interview sentiment scoring, and social media profiling — with no meaningful human review before a hiring decision is finalised.

Why It May Violate the EU AI Act

- Listed as high-risk under Annex III for AI in recruitment and employment decisions.
- Requires conformity assessment, transparency obligations, and human oversight (Articles 9–15).
- Automated rejection without explanation violates candidates' right to meaningful human review.
- Sentiment scoring may encode race, gender, or disability bias, breaching anti-discrimination law.

Real-World Context

Amazon famously scrapped an AI recruitment tool in 2018 after discovering it systematically downgraded CVs containing the word 'women's'. Under the EU AI Act, such systems must now pass conformity assessments and provide documented bias testing results before deployment.
